

Microsoft Azure

CASE STUDY

MICROSOFT AZURE PARTNER:
SharpCloud Software

WEB SITE: www.sharpcloud.com

LOCATION: London, England, UK

ORG SIZE: 15 employees

MICROSOFT AZURE PARTNER PROFILE:

SharpCloud is a data-driven agile tool for strategic planning, communication, and collaboration. SharpCloud stories are highly engaging visualizations that contain data, supporting collateral, videos, and images to uniquely present timelines and relationships. Features include offline and access across mobile devices and Surface Hub. Designed for teams, built to scale, and enterprise-ready.

Microsoft Azure Platform Enables Visual Strategic Planning Software for Collaboration in Enterprises

“SharpCloud is building on the scalability and security of Microsoft Azure to deliver enterprise-strength solutions across strategic business processes. Azure gives our customers the confidence that the SharpCloud service can scale along with their needs.” – Sarim Khan, Cofounder, SharpCloud

• SITUATION

Enterprise workers love the agility of Microsoft Excel and Microsoft PowerPoint but still need to collaborate effectively and tell their stories across linear slide decks, complex spreadsheets, and email. SharpCloud needed the right cloud services provider to help enterprise teams plan, report on, communicate, and make decisions on their business activities by bringing all data into the same collaborative and secure digital space.

• SOLUTION

SharpCloud moved its solution to Microsoft Azure, enabling customers to access the SharpCloud tool using Azure’s single identity and secure authentication process via Active Directory. SharpCloud uses Azure Storage to aggregate Microsoft Office files and SharePoint content and videos, then presents the data in a highly visual, flexible way. SharpCloud’s ability to present timelines and relationships uniquely and to create data-driven views helps workers gain high-level insight and be more productive.

• BENEFITS

Microsoft Azure’s reputation and trusted network give enterprise customers added confidence in the strength of SharpCloud’s solution.

Azure’s scalability and flexibility enable the SharpCloud service to scale with enterprise customers’ demands.
